Perfect composition.
With Merck on your side,
you don't need to improvise

Your benefits

- ▶ Comprehensive portfolio for innovative cosmetics products
- ▶ Excellent quality and high purity
- ▶ Regulatory support and detailed documentation
- ▶ Customized solutions
- ▶ Available in quantities from milligrams to tons

Merck makes the difference

The cosmetic industry lives on innovation. The key to market success is offering new products that respond to customer needs and expectations, and the main differentiating factor is new active ingredients. With products, services, and expertise from Merck, being innovative is easier than ever.

Comprehensive range of products

Merck provides customers in the cosmetics industry with a comprehensive product portfolio for their organic synthesis applications in R&D or production, including building blocks, reagents, and solvents. We offer a great variety of high-quality products that assist you in finding novel active substances and designing new, innovative products.

Regulatory assistance and detailed documentation

As a matter of course, our organic synthesis products for cosmetics feature the homogenous high quality and purity you have come to expect from Merck. Not only do we ensure that our products meet all appropriate regulatory requirements, we offer first-class support in regulatory matters as well. Moreover, our service includes substantial and reliable documentation and specifications of the materials used in your final product – for maximum transparency and safety.

Customized offerings

With Merck, you get exactly what you need: You require unusual amounts or bulk quantities for your production? Our products are available in quantities from single milligrams to several tons. You need your chemicals delivered in tailor-made packages? No problem! We provide customized solutions adjusted to your processes – because innovation needs flexibility.
