

Organic synthesis for the pharmaceutical industry

Perfect harmony

With Merck on your side,
you call the tune.

Your benefits

- ▶ Comprehensive range of products
- ▶ Detailed documentation and regulatory support
- ▶ Excellent quality and high purity
- ▶ Customized solutions

Products and services for your market success

The development of a new pharmaceutical is a challenging process. Merck can support you in ensuring its success. From the search for active pharmaceutical ingredients (API) to the production of the final medicine – with our full range of organic synthesis products and services, we are the competent partner on your side.

Comprehensive product portfolio

Merck provides a wide range of products for organic synthesis applications in your research laboratory or your production facilities, including building blocks, reagents, and solvents.

Excellent quality and comprehensive documentation

Thanks to their homogenous quality and high purity, organic synthesis products from Merck are perfectly suited for use in the pharmaceutical industry. As a matter of course, our materials meet all appropriate regulatory requirements. Our service comprises first-class support in regulatory affairs as well as detailed documentation, ensuring the transparency needed for more safety in your processes and pharmaceuticals. We now offer you comprehensive documentary [material for pharmaceutical synthesis, non-GMP](#), including dossiers about specification, manufacturing process, or impurity information – everything you need to document the materials used for your final product from start to finish.

Customized solutions for your processes

Special packaging solutions adjusted to your processes, delivery of unusual quantities from milligrams to tons, adjusted specifications, and technical support from our experts – with Merck you get exactly what you need.
