

Organic synthesis for the technical industry

Perfect groove.

With Merck on your side,
you drum up your business.

Your benefits

- ▶ More than 6,000 products
- ▶ Customized solutions
- ▶ Available in quantities from milligrams to tons
- ▶ Excellent quality and high purity

Products and services for many different applications

Requirements in the technical industry are very diverse. Whether you use applications in galvanics/electroplating, electronics, coating or the plastics industry – Merck has on offer the right product for you. Our organic synthesis portfolio comprises more than 6,000 products for different technical applications. And if you need something special, we customize them accordingly.

Tailor-made product adjustments

Merck provides a wide range of organic synthesis products including building blocks, reagents, and solvents. But there is more: In order to meet your individual requirements, we can carry out extensive adjustments and custom modifications for you, regarding, for example, specifications, special mixtures, or tailor-made packaging solutions adjusted to your processes. And if you need unusual amounts or bulk quantities: We deliver our materials in quantities from single milligrams to several tons.

Excellent quality and high purity

Thanks to their homogenous excellent quality and high purity, organic synthesis materials from Merck can be used in many different fields. Because when it comes to quality, you can rely on Merck's experience and expertise. As the competent partner on your side, we help you succeed.
